

- KEY FEATURES
- Guaranteed upload and download speeds of 200Mbps
- No need to request bandwidth upgrades to use above 200Mbps
- Burst up to 1Gbps whenever you need to, at no extra cost
- Growing availability in UK cities
- Delivery within 65 working days
- Comprehensive 100% SLA
- 5 business hour 'return-to-service' guarantee
- 24/7 UK support
- Unlimited usage

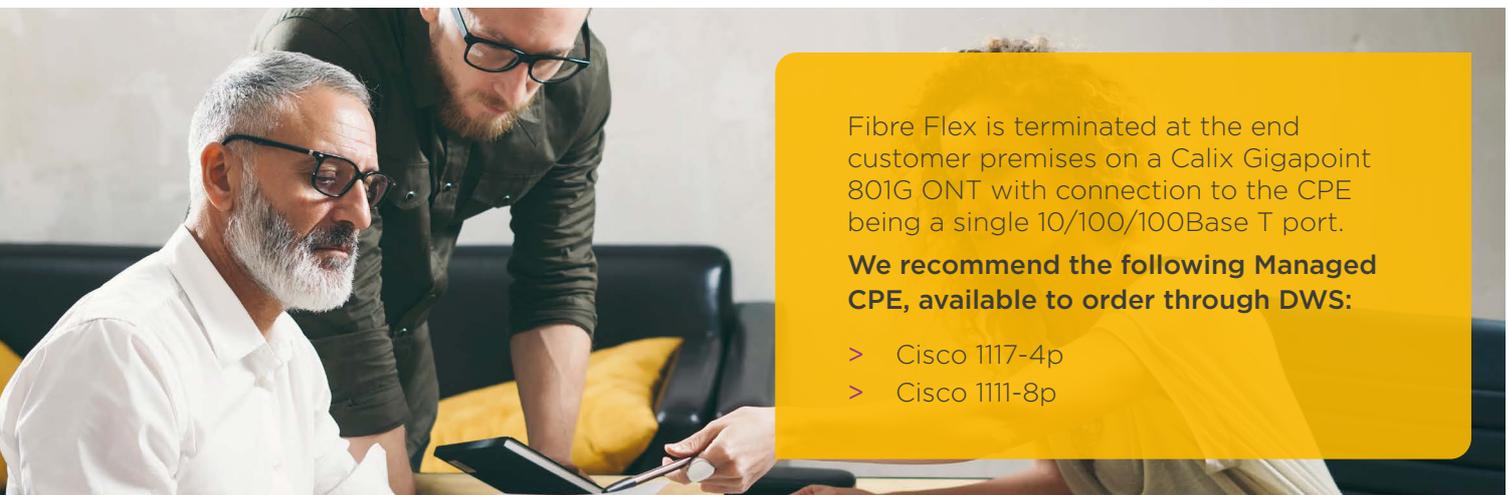

Shared Fibre Flex from Digital Wholesale Solutions is a highly cost-effective form of full fibre Dedicated Internet Access connectivity for businesses looking to balance exceptionally high speed with price while retaining critical reliability.

Shared Fibre Flex has a guaranteed symmetrical bandwidth of 200Mbps and can burst up to a peak of 1Gbps.* This is an ideal product for businesses that want to maintain an exceptionally fast connection and accommodate occasional need for more bandwidth at no extra cost.

Having a pure fibre connection directly into the business premises gives access to gigabit-capable speeds vastly outperforming comparably priced services, such as copper EFM or partly-fibre EoFTTC/GEA connections. Full fibre services are also less susceptible to the effects of bad weather, experience fewer incidences of theft and are unaffected by electrical interference.

The access technology works by using a shared fibre tail that is split. The pure fibre connection is continued to no more than 8 business customer premises, from a node close to the end customer premises. The limited number of customers who share the fibre tail and network port delivers a consistently reliable bandwidth, significantly above 200Mbps, even when all connections are being used simultaneously at their maximum.

*Dependant on network availability & CPE configuration

Fibre Flex is terminated at the end customer premises on a Calix Gigapoint 801G ONT with connection to the CPE being a single 10/100/100Base T port.

We recommend the following Managed CPE, available to order through DWS:

- > Cisco 1117-4p
- > Cisco 1111-8p
