System Optimisation Audit

Improve your business processes with a deep dive into your system setup

With ECI's System Optimisation Audit, our experienced e-automate consultants will remotely access your e-automate system with your leadership and senior level managers to perform a comprehensive diagnostic analysis. They will examine the following areas of the software in detail:

- General and administrate settings
- Accounting, reporting, and auditing
- Automation, logistics, and workflow

- Inventory control and stock level settings
- Online presence, e-commerce, and automation
- Service module settings

Following the audit, you will get an executive summary of your session along with recommended changes to optimise your system.
