

# Connecting People, Things & Machines

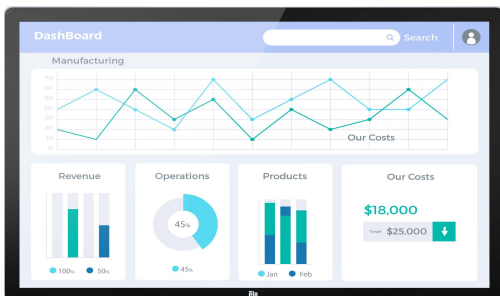

Process automation in the Industry 4.0 world

As businesses transform to take advantage of Industry 4.0, a new set of connected, interactive devices are needed to enable multi-functional, intuitive interfaces. With this digital transformation and the ability to access data in real time, technology driven innovations are continuously evolving to accelerate the growth of fully automated processes from commercial kitchens to car factories.

Elo's touchscreen and compute product portfolio, and particularly its approach to Android are a key enabler for Industry 4.0. We have created an eco-system of devices purpose-built to work together, streamlining the communications of controls deployed across enterprises.

Elo solutions include open-frame touchscreens, small and large format all-in-one signage and desktop touchmonitors.
