

WHAT WE DO

NTA have a service for our Hosted Telephony partners called the Hosted Virtual Network Operator (HVNO). The service is designed to create a platform which all of our resellers can brand as their own, including giving them their own domain pointed to the portal, giving the service a 100% White-Labelled appearance.

The NTA service team then work in the background to support the resellers to ensure the service delivers the reliability expected from traditional PBX's, with support delivered 24/7, 365 days a year.

The platform, owned and operated by NTA, has over 500 features as standard including Voicemail, Voicemail to Email, Call Queuing, Hunt Groups and IVRs. More sophisticated features such as Wallboards, CRM Integration and a Dialer which can be connected to the TPS service are also available.

Rather than charging you a monthly fee for every extension added to our platform, we charge based on the concurrent calls needed across all your customers at any one point.
