Why use PAe Business Intelligence?

PAe Business Intelligence Dashboard allows users to monitor feeds and visuals from all Print Audit solutions and chosen 3rd party applications which highlight important KPIs within a business.

Key Features:

- Automatic data update
- Source data application
- Drill down functionality
- Graphical components
- Available on all mobile platforms.

Automatic updating:

Data is transferred into a dashboard via the business information system on a routine basis, displaying the latest information from the requested outputting source.

Source Data application:

All Print Audit software is compatible with the dashboards. Data feeds can be created from 3rd party applications.

For Example:

- Service management systems
- Accounts packages
- CRM systems

Drill down:

Redefine search parameters by drilling down into customer site or manufacturer representing the specific data regarding which area was clicked.

Graphical Components:

Key graphical components are available 'out of the box' highlighting vital business information and KPIs.

Mobile compatibility:

The dashboards are available on any mobile device and can be accessible while on the move and in a visually pleasing way, that can be presented to customers.

The Business Intelligence Dashboard has been designed to help streamline business processes when monitoring vital data, allowing the user to compare data and take action if needed.
